Abstract- *This research is conducted on the basis of the need for a system that can handle the credit application quickly to facilitate the credit subag. The Market Bank makes the credit application and calculates the installments manually by doing so using the calculator tool. Constraints that occur today is with the manual process, frequent occurrence of errors in charging customer data and installment calculations. Research conducted with the aim to build a system based information desktop that can be used in applying back to back credit when charging customer data and installment calculations so as to facilitate the credit subag. Data collection techniques are done by interview, observation and literature study. System development method used is Prototype and system design tools used are Data flow diagram, DFD level 0, Entity Relationship Diagram. The result of this research is a information system of credit backing back by using structureconcept.*

Keywords: Filing back to back loans, Bank
